

One NSTAR Way  
Westwood, Massachusetts 02090

June 6, 2006

Mary L. Cottrell, Secretary  
Department of Telecommunications and Energy  
One South Station, 2<sup>nd</sup> Floor  
Boston, MA 02110

Re: ORDER OPENING AN INVESTIGATION INTO COMPLIANCE WITH G.L. c. 164 116B  
D.T.E. 06-48

Dear Secretary Cottrell:

On behalf of NSTAR Gas Company, attached are the responses requested by the Department of Telecommunications and Energy in the above referenced proceeding.

Thank you for your attention to this matter.

Sincerely,  
*Kerry Britland*  
Kerry Britland (Cmk)

**NSTAR Gas Company**  
**Response to DTE Questions**  
**June 6, 2006**

---

Effective April 1, 2003, the Massachusetts General Laws were amended with the addition of Chapter 164, § 116B ("Section 116 B"), which reads in relevant part:

[w]henever the commonwealth or a city or town undertakes the repair of streets, roads or sidewalks the appropriate gas company shall provide for the maintenance and improvements of its gate boxes located in the streets, roads or sidewalks to be repaired, so that the gate boxes are more easily and immediately accessible.

NSTAR Gas responds to the Department's request for information relating to the Company's compliance with Section 116B, as follows:

1. Provide the relevant portion of the Operator's O&M Plan that ensures compliance with Section 116B:

Attached as Appendix 1 is the Company's written O&M procedure covering "Valve Box Adjustments and Repairs in Conjunction with Roadway Reconstruction," which details the Company's internal process to remain in compliance with Section 116B.

2. Provide an excel spreadsheet of service territory streets that were paved in 2005, and the date that the gate boxes were made "easily and immediately accessible:

Attached as Appendix 2 is an excel spreadsheet listing the streets and roadways that were paved in 2005 by city and town and the dates that NSTAR Gas raised the valve boxes that were located in the repaved areas. The Company will supplement this filing with the excel spreadsheet as soon as it is available.

3. Provide the relevant portion of the operator's O&M Plan that delineates policies concerning how operator employees collect data to ensure compliance with 116B:

Please see the section entitled "Communicating with Cities and Towns" in Appendix 1.

As noted in Appendix 1, the Company's general procedure is to send a "formal request in writing" to each city and town in its service territory on an annual basis to solicit available information on plans and schedules for reconstruction and resurfacing projects in those communities. In the Company's experience, there is broad response from the municipalities receiving the request and the street and

roadway paving projects actually completed during the construction season track the pre-season information to a large extent. However, the process is inevitably affected by local funding and scheduling priorities, which creates a fluid situation in each of the 53 cities and towns in which the Company provides service. The Company attempts to address this uncertainty through regular attendance at preconstruction meetings, frequent communications with paving contractors regarding their paving schedules and ongoing contact with the Department of Public Works in each municipality.

All responses from the municipalities in which the Company provides service are reviewed and maintained at the central office. In addition, copies are provided to the respective area managers, who maintain direct contact with the Department of Public Works in their service area. NSTAR Gas employs four area managers covering six operating districts (Somerville/Hyde Park, New Bedford/Plymouth, Worcester and Southboro).

**4. All relevant evidence that operators are in compliance with Section 116B:**

Effective April 1, 2003, Section 116B sets the following requirements for a gas company:

- [w]hen a city or town undertakes the repair of streets, roads or sidewalks;
- the gas company shall provide for the maintenance and improvements of its gate boxes located in the streets, roads or sidewalks to be repaired;
- so that the gate boxes are more easily and immediately accessible.

The procedures followed by NSTAR Gas meet and exceed the requirements imposed by Section 116B based on the following:

- On an annual basis, NSTAR Gas inspects all critical valves<sup>1</sup> to ensure that these valves are operable and immediately accessible. A “critical valve” is a valve located on a high-pressure main and installed for emergency purposes;
- On an annual basis, NSTAR Gas inspects all valves located on a service line providing gas to a theater, church, school, factory or other buildings of general assembly to ensure that these valves are operable and immediately accessible.

---

<sup>1</sup> NSTAR Gas identifies “critical valves” for each high pressure distribution main system spaced so as to reduce the time to shut down a section of the main in an emergency as required by 49 C.F.R. 192.181. The Company determines critical valves on distribution mains based on operating pressure, the size of the mains and the physical and operational characteristics of the distribution system. 49 C.F.R. 192.747 requires these identified critical valves be checked and serviced at intervals not exceeding 15 months, but at least once each calendar year. The Company’s inspection procedure checks for evidence of damage, proper positioning, presence of obstructions in or near the box, lubrication of the valves, turning the valve sufficiently to ensure operation, checking for valve leakage with a gas detector, visual inspection of the box, painting the box with yellow paint and ensuring that proper dimensions are present on the valve location sketch.

- At the time a city or town undertakes the repair of streets, roads or sidewalks (and with adequate notice), NSTAR Gas raises all valve boxes affected by the construction (whether located on a main or service) to finish grade and cements around the collar to ensure stability. NSTAR Gas also makes a return visit after the paving is completed to confirm that the valve box is immediately accessible.
5. All relevant evidence that demonstrates that all valves on its mains and all curb valves on its service lines are immediately and readily accessible. Requirements applicable to valves on mains are described in Part 192, § 192.181. Requirements for service line valves are described in Part 192, § 192.365 and in 220 C.M.R. § 101.06(14).

It is the Company's standard practice to install covered and durable valve boxes designed to protect and provide access to all valves installed underground. All valve boxes have an inside box diameter sufficient to provide access. Valve boxes are installed so that the top of the box is flush with the finished grade in the immediate area. Once installed, the Company maintains its valve boxes consistent with the requirements of Section 116B. The Company's procedures for complying with Section 116B are discussed in response to the foregoing questions.

## DISTRIBUTION

## **OPERATING AND MAINTENANCE PROCEDURES**

## **VALVE BOX ADJUSTMENTS AND REPAIRS IN CONJUNCTION WITH ROADWAY RECONSTRUCTION**

Page 1 of 2

#### **4.12.0 VALVE BOX ADJUSTMENTS AND REPAIRS IN CONJUNCTION WITH ROADWAY RECONSTRUCTION**

#### 4.12.1 COMMUNICATING WITH CITIES AND TOWNS

- a. Prior to the commencement of the construction season each year the Compliance and Corrosion group will formally request in writing any available information on plans for road reconstruction and resurfacing for each city and town in the service territory.
  - b. The letter will be sent to the responsible town official requesting a list of streets and a proposed schedule of projects. Responses will be compiled by the Compliance and Corrosion group. A summary of proposed projects for each district will be provided to the responsible Distribution Manager, Manager of Planning and Scheduling and Manager of Engineering. Copies of any information provided directly to the district by cities and towns will be forwarded to the Compliance and Corrosion group for processing and distribution.
  - c. Cities and Towns not responding to the letter request will be contacted by an NSTAR community relations representative. Any information obtained by the community relations representative will be forwarded to the Compliance and Corrosion group for processing and distribution.

#### 4.12.2 SCHEDULING

Upon receipt of the street listings and schedules provided by the municipalities the area planning and scheduling supervisor will arrange for leaks surveys on the affected to identify any new leaks requiring repair. The planning and scheduling supervisor, in conjunction with the central resource planner will check the affected streets for any outstanding maintenance work (class II leaks, corrosion repairs) and schedule the work for completion prior to the city or town commencing their work. Responsibility for coordinating and scheduling with town officials will remain with the area manager or planning and scheduling supervisor at all times. In the event that the company is notified that a street not appearing on the proposed list will be paved, every effort shall be made to conduct a leak survey, complete any repairs and make the necessary valve box adjustments or repairs prior to paving. If the company becomes aware that paving activity has rendered valve boxes inaccessible, the area manager shall contact the responsible town official to arrange a schedule for the necessary repairs.

#### 4.12.3 POST-PAVING INSPECTION

The area manager and the planning and scheduling supervisor shall be responsible for scheduling follow-up inspections after road reconstruction or paving is completed to ensure accessibility of the raised valve boxes. The municipality shall be notified by the area manager and additional repairs scheduled if valve boxes become inaccessible due to paving after having been raised.

## OPERATING AND MAINTENANCE PROCEDURES

VALVE BOX ADJUSTMENTS AND REPAIRS IN CONJUNCTION  
WITH ROADWAY RECONSTRUCTION

Page 2 of 2

## 4.12.4 DOCUMENTATION

- a. The number and locations of valve boxes raised or repaired shall be documented on the Daily Activity Report by the working leader and validated by the responsible distribution supervisor. This information shall also be recorded in the Area Daily Operating Report.
- b. All instances of no notification, inadequate notification or subsequent damage to valve boxes after adjustment or repair were made shall be documented and brought to the attention of the responsible town official. Records of such occurrences shall be maintained in the district.
